Join us for a fun and informative session on web accessibility! Renowned expert Jared Smith, associate director of WebAIM, will present an overview of HTML5, highlighting the differences between versions of HTML5/HTML/XHTML.

Topics covered will include:
- A thorough overview of HTML5 language
- How to implement it in your own web pages and applications
- Specific, real-world examples showing where ARIA and HTML5 are useful and necessary for optimal accessibility
- An overview of support (and the lack thereof) for assistive technologies
- Examination of the impact to assistive technologies caused by implementing HTML 5

Speaker Bio: Jared Smith is the Associate Director of WebAIM. He is a highly demanded presenter and trainer that provides web accessibility training to thousands of developers throughout the world. With a degree in Marketing/Business Education, a Masters Degree in Instructional Technology, and more than 13 years experience working in web design, development, and accessibility, he brings a wealth of knowledge and experience to help others create and maintain highly accessible web content. His work includes a broad range of tutorials and articles featured on the WebAIM site. Jared is active on twitter at @jared_w_smith.
